

Job Specification

For: Field Service Engineer

Ref: VR/01225

Job Description

Attractive package plus benefits

Location Flexible

The company is a wholly owned subsidiary of a Danish multinational, one of the world players in truck mounted loader cranes. Our success is based on our reputation for outstanding quality and reliability, backed by first class after sales service. Customers operate at the sharp end of the industry and expect high standards. Due to a significant increase in the number of our cranes in the UK market, we now need additional field-based technicians to join the company.

Reporting to the Field Service Supervisor this is a demanding role requiring flexibility, technical competence, and business acumen.

The successful candidate will be a highly motivated individual with experience in a field service role. Previous work with hydraulic systems is essential and experience of cranes is required. The ability to hold or obtain ALLMI Thorough Examiner certification is required.

The candidate must have the ability to work on their own initiative as well as part of a focussed team, they must possess the communication skills to be able to deal effectively with customers, business partners and colleagues.

In addition to an attractive salary, the position comes with a range of benefits, a fully equipped mobile workshop, product training necessary to carry out the work effectively and technical support. You would also benefit from being part of a dynamic, successful and ambitious team
