

## Job Specification

**For: Electrician**

Ref: VR/01234

### Job Description

---

#### Outline

The company has specialised in the aerospace sector since its inception, our earliest involvement meant working directly with the pioneers and founders of the modern UK aerospace industry. This included De Havilland, Hawker Siddeley, Handley Page, Rolls Royce, British Aircraft Corporation and Westland Helicopters. We are pleased to say that this involvement continues to the present day and this now includes business from 1st and 2nd tier suppliers to the prime manufacturers.

The expertise gained in this field has enabled us to transfer our skills to the satellite, defence, motor sport and medical industries where we can offer specialist treatment solutions for complex and intricate engineering requirements.

Range of treatments covers Non-Destructive Testing, Electroplating, Anodising, Painting and Process Evaluation. Many of the jobs we undertake require numerous processes. Undertaking these processes on one site offers cost savings and faster turnaround times to our customers.

Due to changes within the business, the company has an immediate vacancy for a Electrician/Maintenance person. This role is part of the Maintenance Team reporting directly to the Maintenance Manager.

#### Role

We are offering an excellent opportunity for a qualified Electrician to join us. Your primary role would be to provide General Maintenance & Electrical work across the whole site.

The chance to join a profitable, diverse group who embrace change programmes to deliver improvements.

#### *About you*

You will have previous experience working in a similar position and have a track record of being successful, pro-active, and driven.

#### *Desired Skills and Experience*

- Up-to-date qualifications with current standard BS7671
- City and Guilds level 2 & 3 Electrical Installations
- City & Guilds 2391-52

Job Specification provided by:
